To Set PATH on Linux Procedure

Steps

1. Change to your home directory.

```
cd $HOME
```

2. Open the `.bashrc` file.

3. Add the following line to the file. Replace the *JDK directory* with the name of your java installation directory.

```
export PATH=/usr/java/<JDK Directory>/bin:$PATH
```

4. Save the file and exit.

Use the `source` command to force Linux to reload the `.bashrc` file which normally is read only when you log in each time.

```
source .bashrc
```

Note –

Note that if you wish to set the `PATH` for all users, you need to log in as root in the bash shell and perform the above steps on the `.profile` file in the `etc` directory and not the `.bashrc` file in the home directory.
